SUMMARY

Developer and cybersecurity graduate. Completed the Certificate IV in Cyber Security at TAFE Queensland in September 2026 and starts a Bachelor of Information Technology (Computer Science) at QUT in 2027. Ships software end to end: Blimo, a desktop app released for Windows and Mac, and Velo, a client workflow platform in development. Cert IV work includes a red team incident response exercise, an AWS cloud security plan and a Python port-scanning tool. Customer-facing work since 2021. Looking for junior security, IT or fullstack roles, part-time or casual alongside study.

TECHNICAL SKILLS

Security & networking: Kali Linux, Metasploit, Hydra, Wireshark, Nmap, Metasploitable 2, DVWA, TCP/IP, DNS, DHCP, firewall configuration, vulnerability assessment

Systems & cloud: Linux (Debian/Ubuntu), Windows, AWS (EC2, VPC, CloudFormation, Application Load Balancer), virtual machine labs

Programming: TypeScript, JavaScript, Python, SQL, Bash, C (learning)

Web & tooling: React, Next.js, Electron, Tailwind CSS, PostgreSQL, Supabase, Stripe, Git and GitHub, Vercel, Cloudflare

Professional: Technical documentation, incident reporting, stakeholder communication, escalation and triage

PROJECTS

Blimo – Desktop app for Windows and Mac | Electron, React, TypeScript — Oct 2026

- Built and released a desktop pet whose face is generated from its name, with 21 moods, a customise panel and reactions to music, video and idle time. Version 1.2 supports Windows 10/11 and macOS (Apple Silicon and Intel).
- Chose Electron for the transparent, click-through, always-on-top window the product depends on. Shipped an installer that updates itself from GitHub Releases without admin rights.
- Designed it to read only cursor position and idle time, never keystroke content, and to contact GitHub only to check for updates. Designed the architecture; AI coding assistants helped write the code.

Velo – Client workflow platform | Next.js, TypeScript, Supabase, Postgres — Started Mar 2026

- Building a full-stack platform for Australian freelance developers and agencies: proposals, client approval links, milestones, invoicing with PDF export and a client portal.
- Implemented Supabase authentication with middleware route guards, an operator admin panel, transactional email through Resend and Stripe Checkout for invoice payments.
- Added rate limiting, security event logging and signature-verified Stripe webhooks. Marketing site and waitlist are live; the product is in development with no launch date.

Hawthorne Corner Store – Website for a local business | React, Vite, Tailwind CSS — 2025 – Present

- Built and maintain the site for a Brisbane convenience store: opening hours with live open or closed status, click to call, directions, reviews and in-store services. In production since 2025.

System Fingerprint Tool – Cert IV assessment | Python, Tkinter — 2025

- Wrote a desktop tool that collects a machine's details (name, IP and MAC address, processor, operating system, internet speed), scans all 65,535 local TCP ports across 200 threads and appends the results to a CSV inventory.

Incident Response Team Exercise – Red Team Lead | Cert IV in Cyber Security, team project

- Led the red team in a six-person simulated incident response engagement for a fictional client, attacking an isolated Kali Linux and Metasploitable 2 lab network against an opposing blue team.
- Ran SSH brute force attacks with Hydra and reverse TCP payload attacks with Metasploit, documenting each step with evidence for blue team analysis.
- Wrote the Project Charter, Rules of Engagement and attack playbooks, and presented findings in a formal debrief and closure report.

Cloud Security Plan – AWS migration | Cert IV in Cyber Security, AWS, CloudFormation

- Assessed a case study business's AWS environment, defined in CloudFormation, and designed a hardened upgrade with a network firewall, application load balancer, multi-subnet architecture and segmented security groups.
- Produced testing and migration, monitoring and maintenance, and cloud incident response plans, including a containment, eradication and recovery matrix.

jaineel.dev – Personal portfolio | Next.js, TypeScript, Tailwind CSS

- Designed and built this site and a project page for each of the above, deployed on Cloudflare.

EXPERIENCE

Bartender, Pig N Whistle — April 2022 – Present

- Maintain compliance with liquor licensing and RSA obligations in a high-volume Brisbane venue, including refusal of service and incident documentation.
- Assess risk and de-escalate situations in real time, making judgement calls under pressure with limited information.
- Coordinate with team members across a busy service floor while handling cash and point of sale systems accurately.

Customer Service Team Member, Coles Supermarkets — September 2021 – January 2022

- Triaged customer and operational issues, resolving what could be handled on the spot and escalating the rest to the appropriate department.
- Worked to documented procedures in a fast-moving retail environment, prioritising competing tasks during peak trade.

Sales & Operations Assistant, KFC — January 2021 – July 2021

- Processed orders through point of sale and order management systems with accuracy under consistent time pressure.
- Followed standardised food safety and operational escalation procedures in a KPI-driven environment.

EDUCATION

Bachelor of Information Technology (Computer Science), Queensland University of Technology — Commencing 2027

22603VIC Certificate IV in Cyber Security, TAFE Queensland (South Bank) — October 2025 – September 2026

- Network security infrastructure, breach detection and incident response, penetration testing fundamentals, cloud security, risk management frameworks and secure network design.

Queensland Certificate of Education, Balmoral State High School — 2021

- Mathematics, English, Physics, Aerospace Systems and Digital Solutions.

LICENCES & CERTIFICATIONS

- AVI30316 Certificate III in Aviation (Remote Pilot – Visual Line of Sight)
